

SCMS Upcoming Courses:

| | |
|-------------|---|
| Course | Advanced Trauma Skills |
| Date | 29 Sept 2024 |
| Description | <p>The intent of this one day, 7 hour workshop is to review critical trauma interventions within a pre-hospital context. Evidence-based approaches from best practice guidelines will be critically evaluated. Building upon traditional PCP and ACP skills to better manage and evaluate casualties across rural Alberta. The MARCH protocol will be discussed which is the current guidelines recommended by the Committee of Tactical Combat Casualty Care. Practical sessions will include hands-on with time with tourniquets, hemostatics for wound packing, new traction devices, IT-Clamp, other skills labs.</p> |

|-------------|--|
| Course | Extended Field Care Workshop |
| Date | 30 Sept 2024 |
| Description | <p>Our objective on this one-day workshop is to reflect and critically evaluate the growing amount of literature, guidelines, and military data on extended field care considerations. Ultimately, we want to take relevant content and apply it to rural Alberta EMS events. Extended Field Care is "holding onto a sicker patient than you can care for, for longer than you want, with fewer resources than you need, in a place you don't want to be."</p> <p>Evidently, this doesn't just occur in military operational settings; it occurs in civilian settings as well. We want to explore the ways that the US military, ICRC and MSF are currently implementing extended field care with a focus specifically on expanding key trauma care concepts that directly relate to pre-hospital interventions. Finally a hands on practical exposure to new innovative EMS devices with skill stations will be included in this seminar.</p> |

All courses will be held at Maskwacis Ambulance Training Facility. Each course is \$225, a non-refundable deposit of \$50 is required for enrolment. Contact ray@maaems.com for any questions you may have or to sign up for a course.
